Are Your Kids at Risk?

Bacterial and infectious diseases are becoming more resistant to antibiotics. The Center for Disease Control recognized a major increase in *Staph* infections since the year 2000. This increase resulted in a health bulletin release recommending all teams routinely wash sports equipment to prevent the spread of these highly contagious bacterial diseases such as *Staph*.

At Gear Defense we use state-of-the-art Esporta Wash System to kill bacteria, molds and fungi...the stuff that causes smells and health risks. **NO SPRAYS or COVER UPS.**

Clean sports equipment is a smart health choice for athletes and parents.

- Properly cleaned sports equipment **reduces the health risk** associated with filthy equipment for the player.
- Clean sports equipment can **reduce the liability** associated with infection caused by dirty equipment.
- Cleaning can **extend the useful life of the equipment** and **reduce costs** to leagues and associations.

No more odor caused by germs or bacteria.

No more rashes from filthy equipment.

No more complaints from parents and friends.

Equipment PICKED-UP, CLEANED and DELIVERED in time for practice on Monday!

**SANITIZE!
DEODORIZE!
REVITALIZE!**

Fire Protection Gear

Methicillin-resistant Staphylococcus aureus, more commonly known as MRSA, has infected players in the NFL and NHL as well as athletes in college and high school. In extreme cases it can kill.

At Gear Defense we use state-of-the-art Esporta Wash System to kill the bacteria that causes the drug-resistant Staph infection.

By getting rid of the bacteria, not only is the smell gone, but you are being PROACTIVE in the fight against MRSA.

Currently this type of wash system is being used by teams in the NFL, NHL, colleges and high schools.

Shouldn't your team be using it too?
